

NOXON 2 audio for iPod

Internet radio / network audio player with iPod dock / FM radio

The universal audioplayer

iPod base station, wireless Internet radio, intuitive podcast receiver, multiformat network audio player for music on your hard drive and designer FM radio—the NOXON 2 audio for iPod is a masterpiece for all music fans.

Many music fans have their collections distributed across a variety of media and technologies, resulting in snarled cables, stacks of burned CDs and general file format chaos, and the most powerful member of TerraTec's NOXON family is the simple solution for all applications. Its integrated Universal Dock turns your iPod into a stereo system and charges it. You can also select and play any one of over 10,000 Internet radio stations from around the world—without needing to boot your computer. A refined sorting system that can memorize your favourites at the touch of a button and can be customized in detail helps you stay on top of the vast selection. A wide range of podcasts are also available at the touch of a button—get exactly the information you need straight from the source, without technical hassles.

Thanks to the powerful networking features of the NOXON 2 audio for iPod, you can at last enjoy music from your hard drive anywhere in the house. Regardless of whether you are using a wired or wireless LAN or HomePlug network, your digital music will finally be on tap in your bedroom, living room, kitchen or bath, while your computer stays where it belongs—in your home office.

The audioplayer is extremely keen for contact. Its USB host lets you connect external hard drives and memory sticks. If you're planning a really big party, simply connect active speakers or a full-size HiFi system to the Line-Out or Digital-Out ports. A headphone socket for quiet enjoyment rounds out the selection.

The NOXON 2 audio for iPod can be controlled using a remote or the buttons on the device. Its clear, easy-to-read display provides all the information you need. Security and compatibility are major priorities: all common music formats (including DRM10 for tracks from Musicload and other vendors), WLAN standards and encryption types are supported.

myNOXON

With immediate effect the NOXON series offers a multitude of never before seen content. Besides thousands of Internet radios and podcasts as well as songs from your hard drive, each NOXON can access exciting new services simply and comfortably steered via the portal www.my-noxon.com.

mp3tunes.com offers a virtual hard drive for everyone on the internet. Upload your own songs without any limit and enjoy your music played by the NOXON all over the world via an internet connection.

For lovers of classical music the doors at Classical.com are wide open. Select from the entire portfolio to create your own concerts to enjoy on your NOXON, naturally again without any computer.

Just as simple is the availability of the media center from "Deutsche Welle" which includes for instance a variety of language courses.

Not to forget BeSonic.com - the music portal for newcomers and underground bands. It offers the Top 10, playlists and the unique mood radio on the NOXON.
