

GRABSTER AV450MX

USB box with hardware acceleration for transferring videocassettes to DVD

- Handy USB box for digitising videos
- Integrated hardware acceleration for perfect results
- Gold-plated connections
- High-quality aluminium housing
- MAGIX Video Editing Software
- Includes all needed cables

The Grabster AV450 MX is the compact solution for transferring, editing and burning analogue videos on your home computer with real hardware acceleration – with no compromises when it comes to quality. The housing is made of anodised aluminium, the inputs are gold-plated, and all cables, including a Scart adapter, are included in the scope of delivery. The MAGIX Video Editing Software provides many options and makes editing on your PC as easy as child's play. This ensures that your precious memories are secured optimally– just save them or burn them to DVD straight away!

Save your precious memories

Time takes its toll on your precious memories. Family gatherings, company parties, holidays – your memories of all these moments are on video. The short life expectancy even with optimal storage, magnetic fields, loss of quality due to wear, or just chewed-up tapes due to curious children ... the dangers that jeopardise these memories are many. Avoid them all by transferring your cassettes to your computer and saving your movies there – or burning a DVD, which alsomakes a great gift!

Comprehensive format support

Very many analogue sources can be connected to the Grabster AV 450 MX. Whether VHS, Video 8, S-VHS, Hi8, Betamax or others – almost every device with analogue outputs is compatible. And whether your output source is a Scart output, S-Video or composite, the Grabster AV 450 MX is connected to it in no time. Thanks to the comprehensive cable package that includes a Scart adapter, even beginners can get started straight away. The video source and format are detected automatically and digitised in the highest quality.

GRABSTER AV450MX
